PROJECTS

- **Shopping website**
Shopie is a college project, a dynamic e-commerce website built with WordPress, WooCommerce, HTML, CSS, JavaScript, and jQuery. It offers a wide range of products, a seamless shopping experience, and secure payment integration. Explore Shopie and enjoy the convenience of online shopping
- **College website**
A responsive and visually appealing front-end design, created with HTML, CSS, and JavaScript. Explore our website to discover valuable information about our college, including programs, faculty, events, and more. With a user-friendly interface and engaging elements, we aim to provide an enjoyable browsing experience for all visitors.
- **Facebook clone**
SocialMirror is a web application that replicates the core features of Facebook. Users can sign up, create profiles, post updates, add friends, like and comment on posts, and interact with a familiar and user-friendly interface. The use of HTML, CSS, and JavaScript ensures a responsive and engaging user experience, making it a great platform for social networking. Join SocialMirror today to connect and share moments with friends.
- **Leave management system**
LeaveXpert simplifies leave management with a user-friendly interface. Employees can request leaves, while administrators can approve or reject them. The system tracks leave balances and maintains a comprehensive history log. Utilizing CRUD operations, LeaveXpert ensures efficient management of leave data. Say goodbye to leave management hassles

with LeaveXpert.

- **Chat web**

ChatLink is a MERN stack-based Chat Web Application that enables users to engage in random chat sessions. Users can create accounts, enjoy real-time communication, and connect with other online users for spontaneous and exciting interactions. Join ChatLink today for a delightful chatting experience with new friends.
